## HNC Civil Engineering for England (HTQ)

Location	Stockport College
Course Type	University level
Department	Building Services
Start Date	Monday 14th September 2026
Duration	Part-time, 2 Years
Time	-
Fee	£ 4250.00
Course Code	SPQ-HC4H-1100

### Course Overview

---

Civil Engineering deals with the design, construction and maintenance of the physical and naturally built environment, and includes infrastructure projects such as roads, bridges, dams, sewage systems, pipelines and buildings. This Level 4 Higher Technical Qualification (HTQ) provides a broad introduction to construction and different civil engineering functions and is aligned to the Construction Engineering Senior Technician Occupational Standard.

In addition to acquiring knowledge and specialist skills relevant to this profession, you will develop problem solving, commercial, business and interpersonal skills with the aim of being able to perform key civil engineering tasks and understand processes, operations and work effectively in the sector.

### Course Requirements

---

Whilst applications are considered on an individual basis, they are usually based on a requirement to have 64 UCAS points from either:

A level 3 vocational qualification, GCE A levels or an Access to Higher Education Diploma

GCSE English Language and Maths at grade C/4 or above.

Mature students with relevant experience and/or professional qualifications are welcome to apply and may be invited to interview.

## What You Will Learn

---

As a Civil Engineer you will be expected to make decisions regarding material choices and understand the structural behaviour of materials, testing procedures and perform calculations to establish the performance of materials in use. You will develop an awareness of the design process and be able to produce design propositions and a construction information package for a project. The technologies and processes of civil engineering in the development of highways, bridges and substructures, will be examined so that you can apply this to the design of infrastructure and produce solutions to address hazards and problems encountered in projects. Familiarity with rock types, soils classifications, geotechnical procedures and methods will contribute to your understanding of the design and construction of buildings and infrastructure. You will be given the opportunity to determine and analyse forces within fixed structures and understand the fundamental concepts of structural design.

The development and impact of the construction industry will be explored, as well as the routes to employment and progression. Your knowledge and understanding of the mathematical principles and theories that underpin construction technology, structures and materials will be developed. This will involve the use of analytical and computational methods to solve engineering construction problems, the interpretation of data and application of statistical and calculus techniques. Building Information Modelling, the process of information management through a project life cycle, is explored and will involve the generation of 2D and 3D views of a building model.

## Assessment

---

Students are continuously assessed using a variety of methods including preparation of reports, delivery of presentations, demonstration of skills in practical workshops and through experiments, portfolios and the collation of evidence.

## Progression

---

On completion, you may progress to L5 HND and from there may complete a L6 top-up such as:

BSc (Hons) Structural Engineering

BSc (Hons) Civil Engineering

BEng (Hons) Civil and Infrastructure Engineering

## Career Options

---

On completion, you may consider roles such as:

Civil Engineer  
Site Engineer  
Geotechnical Engineer  
Highway Engineer  
Project Manager  
Structural Engineer

## Mandatory Units

---

At level 4 you will study:

Construction Design Project (Civil Engineering)  
Science and Materials  
The Construction Environment  
Mathematics for Construction  
Civil Engineering technology  
Principles of Structural Design  
Geotechnics and Soil Mechanics  
Digital Applications for Building Information Modelling

## Extra Costs Involved

---

No

## Exam Validation Body

---

Pearson Education Ltd.

## Exam Validation Body

---

Pearson Education Ltd.

## Hours Per Week

---

6 hours for part-time course or 12 hours for full-time course.

## How Long To Complete

---

Two years part-time with one full day attendance per week, or one year full-time with two full day attendance per week.

## Programme Structure

---

Each unit is worth 15 credits and over the course of the programme you will gain 120 credits

## Contact Details

---
